

The International Society for Applied Phycology Call for candidates to held the 7th edition of ISAP Congress

As one of the largest and high scientific level conference of the World on applied phycology, the ISAP congress offers access to the more recent advances on macroalgae and microalgae biotechnology research.

After Almeria (2002), Kunming (2005), Galway -(2008), Halifax (2011), Sydney (2014) and Nantes (2017) the committee presiding the International Society of Applied Phycology invite all the research teams working on phycology to apply as candidate to held and organize the 7th edition of the congress of the ISAP.

? 2020

The International Society for Applied Phycology Call for candidates to held the 7th edition of ISAP Congress

Previous ISAP Congresses have seen the role of applied algal biotechnology and their potential developed in a commercial, remedial or regulatory context. In 2014, the theme of ISAP was chosen to reflect on the actual successes of algae applications as they already represent a sustainable and relevant field of biotechnology.

In 2017 the scope of the 6th edition of ISAP congress was to appreciate the huge phycological biodiversity and the diversity of its biotechnological applications through the prism of a new and promising industrial sector in full development.

Nantes 2017 :

- 560 participants
- 40 sponsors
- 14 exhibitors
- 150 oral conferences
- 200 posters
- B2B meetings
- Young researchers workshops

The International Society for Applied Phycology Call for candidates to held the 7th edition of ISAP Congress

To candidate please address your proposal to

Valéria Montalescot, ISAP Treasurer / secretary
